DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group IV, species E (Figs. 37 and 39) in Paper No. 11 is acknowledged. An action on the merits of claims 39-45 and 50-85 follows.

Claim Objections

Claims 60 and 61 are objected to because of the following informalities: in line 2 of claim 60, the first occurrence of "includes placing" should be deleted. Appropriate correction is required.

Claims 80 and 81 are objected to because of the following informalities: in line 2 of claim 80, one occurrence of "includes placing" should be deleted. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Application/Control Number: 09/694,521

Art Unit: 3732

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 50, 51, 53-57, 62-64, 66, 67, 69, 73, 74, 78, 83 and 84 are rejected under 35 U.S.C. 102(e) as being anticipated by Stone et al. (U.S. 6,387,130). Stone et al. teaches a segmented linked intervertebral implant system and a method for installing said system. Fig. 9 illustrates a method of inserting the segmented implant system 10 in which an elongated member 30 is operated through a cannula 60 which has been inserted through a posterior lateral opening into the disc space. Implant segments 20A-20D are engaged by elongated member 30 via through-holes 21 and may be pushed together by contacting the each trailing end with positioning tool 70 until the segments 20A-20D abut one another in a curved shaped intervertebral assembly 10. As segments 20A-20D are pushed into the intervertebral space, they pivot due to the curvature of the distal end of elongated member 30.

As shown in Fig. 1, the implanted assembly 10 includes a convexly curved wall and an opposite concavely curved wall and the convexly curved wall is anteriorly oriented. When only three segments are used, the center segment 20B is positioned such that its leading end is on a side of the spinal column axis opposite the opening and its trailing end is positioned on a side of the spinal column axis adjacent the opening.

Art Unit: 3732

Segment 20C is positioned in a proximal portion of the disc space adjacent the opening and segment 20A is positioned distally from the opening thereby bi-laterally supporting the verebrae.

The step of actually creating an opening is considered inherent since a posterior lateral opening must exist in order to insert a cannula 60 as shown in Figs. 3, 9 and 10.

Allowable Subject Matter

Claims 39-45 are allowed.

Claims 52, 58-61, 65, 68, 70-72, 75-77, 79-82 and 85 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
